The Charge Grid
The Charge Grid

What is The Charge Grid as an MSP and what does it do exactly?

The Charge Grid is an electric mobility service provider (eMSP) offering charging services for electric cars. Our main goal is to make it easier for electric vehicle drivers to find and use charging stations.

- **Access to the largest charging network in Europe**
- **Full transaction management and reporting**
- **Roaming service, autonomously available**

Whether you want to develop your brand's charging experience or expand your presence in Europe, we give e-mobility service providers the tools they need to win.

Here are our main responsibilities as an MSP:

- **Network Access:** We provide access to an extensive network of charging stations, often through roaming agreements with CPOs.
- **User-Friendly App:** We offer a mobile application where users can find charging stations, start/stop charging sessions, and view their charging history.
- **Payments:** We process payments for charging sessions and ensure accurate invoicing.
- **Customer Service:** We provide support to electric vehicle drivers in case of questions or issues.

The Charge Grid Charging App.

Your personal assistant for public charging of your electric car. The Charge Grid app gives you access to more than 900,000 charging stations in 22 countries. Start charging your vehicle in just three steps:

01

Download Application
